

KIKO WATER ENERGIZER for WATERCEUTICAL™ MARKET

*Based on the physics and
harmonics of water*

www.kikotechnology.org

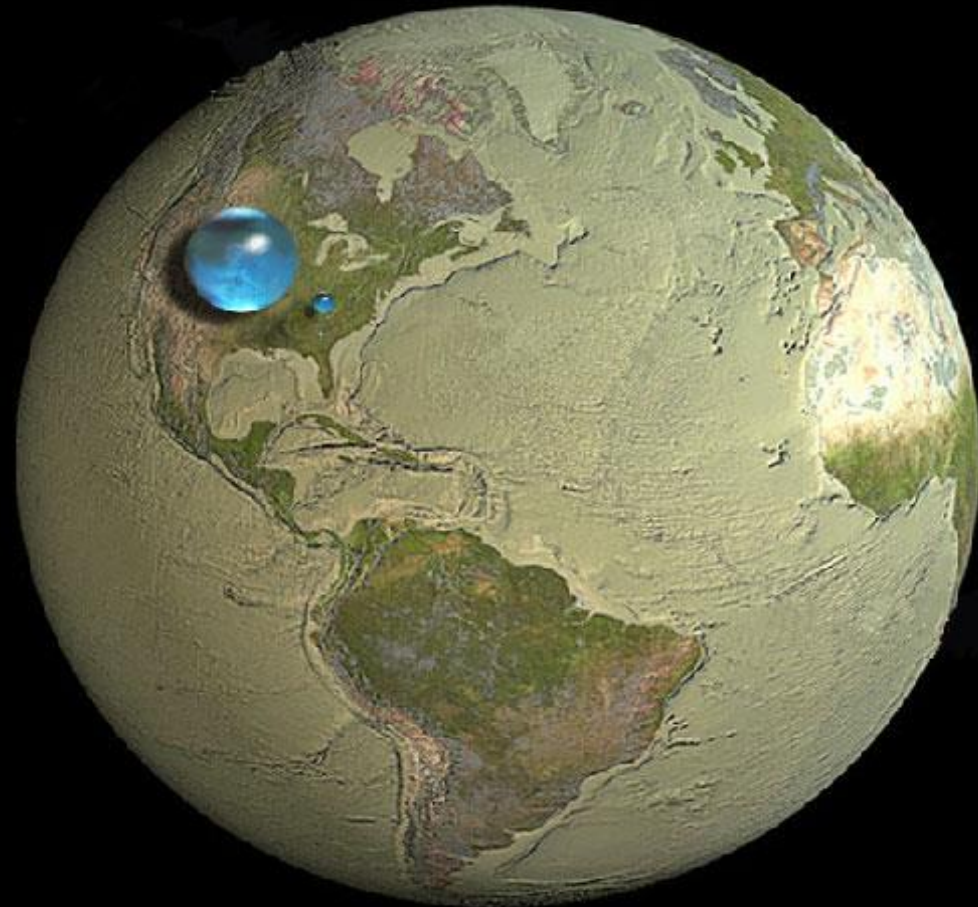

WHAT IS KIKO TECHNOLOGY

- * A Revolutionary “GAME CHANGER”
- * A Green Technology
- * Improves the physics of water without chemicals or enzymes
- * Patenting for all living organisms
e.g. tissue cells regeneration & De-oxidation

WHAT IS HAPPENING TO WATER?

- Today's water is overstressed – only 0.3% of Earth's water (e.g. of 330 million cubic miles) is available for drinking or irrigation since time memorial
- The cause? Increased population and heavy industrial atmospheric pollutants
- The net result? Our everyday water vibrates slower than 70 years ago causing less crop yields, soil eco-imbalances, higher input costs, decreased health

Water in, on, and above the Earth

- **Liquid fresh water**
- **Freshwater lakes and rivers**

Howard Perlman, USGS
Jack Cook, Adam Nieman
Data: Igor Shiklomanov, 1993

THE BIRTH OF KIKO TECHNOLOGY'S KINETIC ENERGY DELIVERY SYSTEM

- Mr. James T Osugi “KIKO Technology’s Founder” after graduating with Dean’s honors from California State University as a mechanical engineer followed his three older siblings and joined the NASA “Man to Moon” project in 1969 – all have invented history changing systems that are still used in everyday life.
- Mr. Osugi participated in the second–stage propulsion unit for NASA, co-authorizing two patents on cryogenic hydrogen and cryogenic oxygen – the very molecules contained in water.
- Adopting an application of Physics called “Phonon Molecular theory”, he invented the Kinetic Energy Delivery System that delivers highly energized water upon immediate contact.
- KEDS is 100% effective all of the time which delivers amazing results, restoring greater balance to living organisms, increases profitability and decreases input costs – simply by allowing everyday water to vibrate at its natural frequency (scientifically measureable and proven over 300 case studies).

WHAT DELIVERS THE ENERGY ? AND HOW DOES IT HAPPEN ?

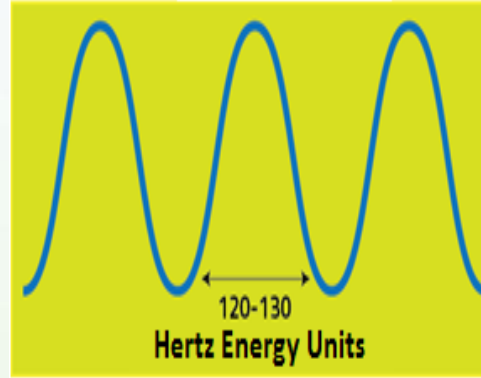

- Due to environmental pollution buildup over the past 70 years, our everyday water simply vibrates slower than what it should.
- KIKO Technology increases everyday water's natural vibration, in turn, to increase its kinetic energy multi-fold, akin to a "tsunami" - recall 2004 Indonesian tsunami spread 1,500 miles in 3 hours yet in the middle of the ocean, there is was no tidal waves (only upon hitting land) - e.g. science is harmonics.
- The carrier of the KIKO Kinetic Energy Delivery System (KEDS) are millions years old natural volcanic molten lava from Japan charged under a proprietary know-how – this carrier allows water molecules to vibrate or resonance three times faster than the speed of a 747 jet – hence the "tsunami analogy".

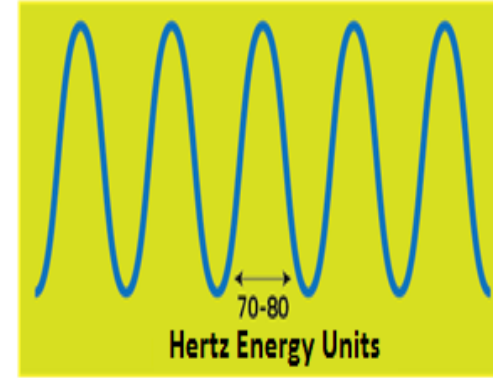

WHAT INSPIRED THE KIKO TECHNOLOGY INVENTION ?

- Research conducted by Dr. Albert Einstein, Sir William Herschel and practice of ancient arts of Acupuncture and Qigong.
- All living organisms are influenced by the Earth's natural electromagnetic shield – and when surface water's slow-moving harmonics is accelerated akin to energized water found deep in the Earth's core, what effect would it have on our health, plant yields and animal husbandry? – the answer is found in the 300+ field studies over 7 years of applied science.

Today's Water -SLOW Vibration

Kiko Treated Water -FAST Vibration

HOW DOES KIKO TECHNOLOGY WORK ?

Reduces the surface tension of water (Separation)

KIKO breaks down the surface tension holding H-O-H molecules and bonded substances such as silica, chlorine, bacteria, calcium carbonate-phosphate-sulfate & other minerals. This action at the molecular state allows hard water to actually ‘feel soft’ – effects are measureable.

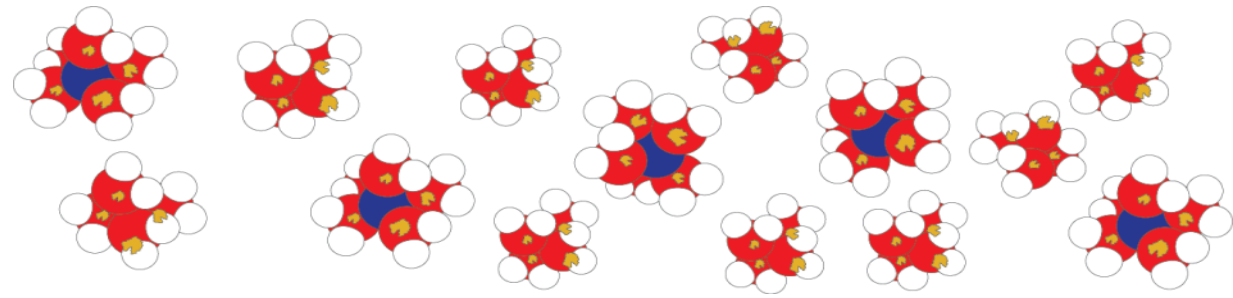

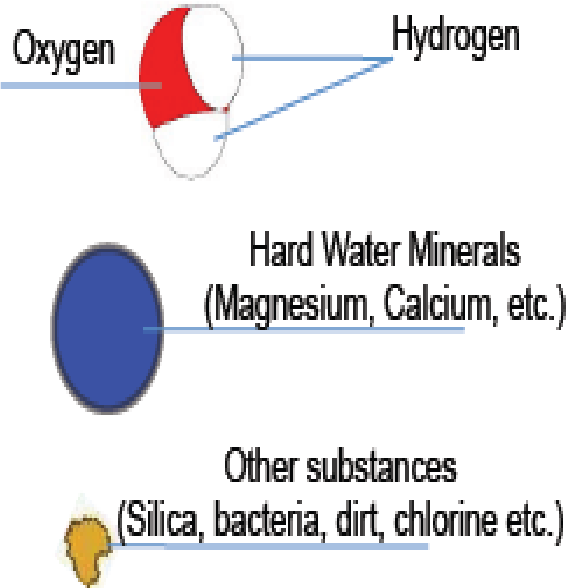

“Soft water” increases living cells absorption rates and faster uptake of nutrients so vital for crop growth and health.

This separation effect also applies for de-scaling & rust removal from tank or equipment surface. The overall effect is energy savings besides clean surfaces and efficient operations.

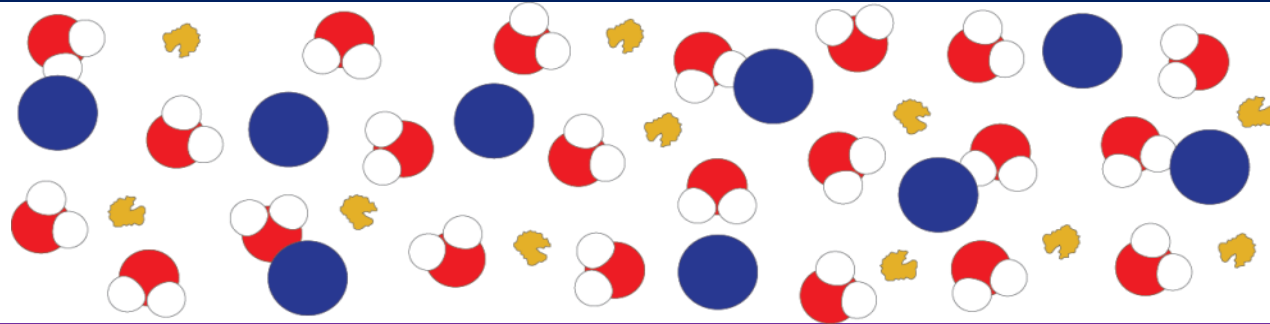

WATER IS NOT PURE H₂O – SURPRISED ?

DIFFERENT MOLECULES IN WATER

Water is a composite of H₂O, minerals, dirt, bacteria, inorganic matter basically a “hard water” or a clustering of composite materials – measurable by surface tension equipment

Kiko Technology separates these clusters of matter allowing molecular separation – the net effect is hard water will feel “soft” – hence the positive effects upon absorption and detoxification in tissue cells

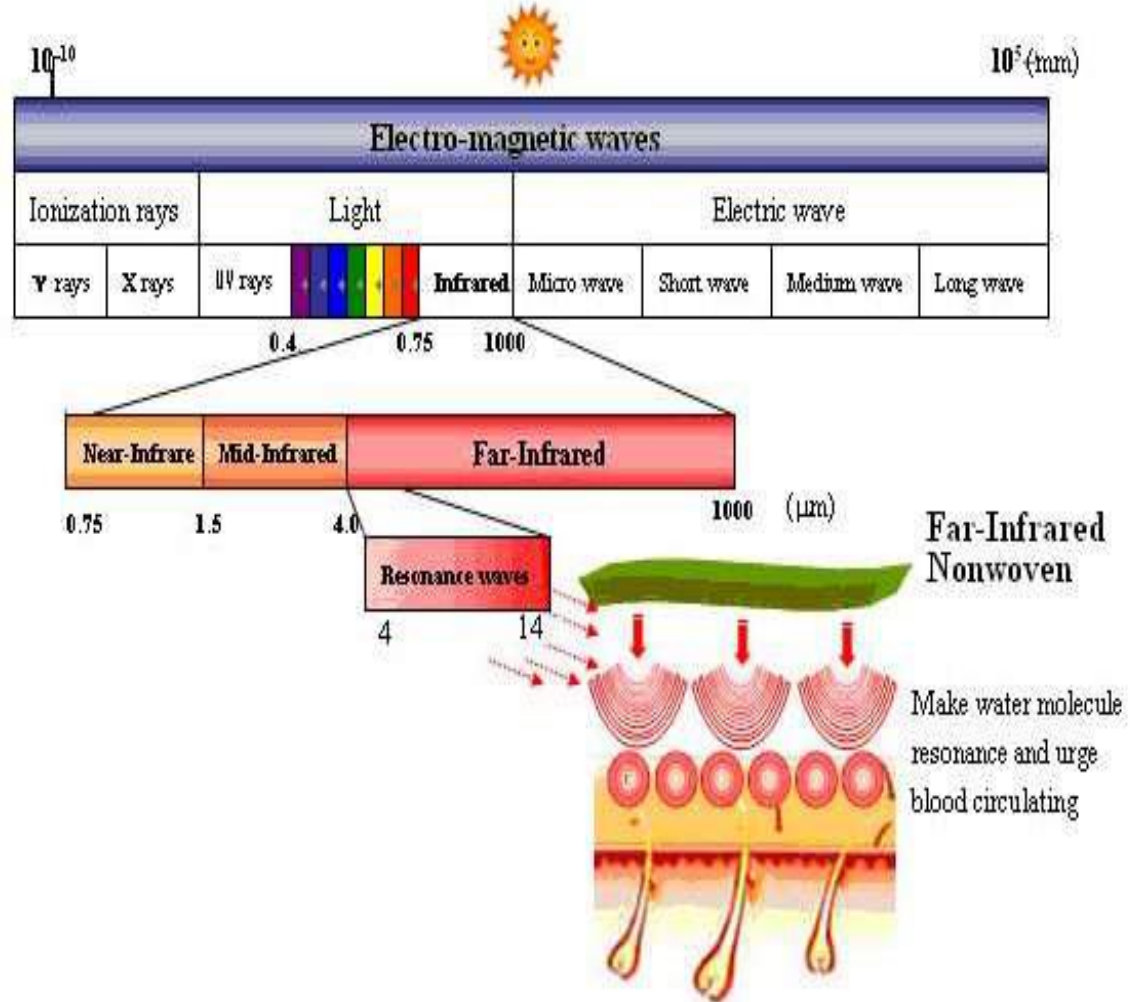

KIKO TECHNOLOGY EFFECTS ON FAR INFRARED ENERGY?

Water absorbs 20 x more Far Infrared energy -naturally in the Air.

FIR energy is a naturally-occurring YET invisible and safe wavelength emitted from the sun.

Regular water absorbs only 4 - 10% of the FIR in the air, whilst with KIKO, the FIR absorption is in Nano seconds and increases to 70% - 90% (very healthy)

KIKO energized water is ideal for growth and regeneration in all living organisms.

VERIFICATION ON EFFECTIVENESS OF ENERGIZED WATER BY WATER INSTITUTE OF JAPAN

Dr. Hidemitsu Hayashi, M.D. & Director, Water Institute of Japan verified in his publicized research article “Healthy Living – Water” that water is dynamic and has a unique micro-cluster capability.

He used techniques including nuclear magnetic resonance analysis and an electrolysis process, to prove that clusters of water molecules from 10 to 20 (or more) for regular tap water can be reduced to 5 to 6 for energized (ionized) water. The proof also included a surface tension reduction of water, in turn improving solubility and cell permeability.

KIKO Technology’s “Phonon” kinetic energy delivers identical electrolysis effects that change & vitalize the dynamic of water molecules.

PORTABLE PRODUCT - WATER ENERGIZER

5 Piece Pack

RECOMMENDED DOSAGE

- Immerse one cartridge continuously in any water container, jug, vessel.....etc.
- Install the cartridge to connect to any water inlet line.
- Alternatively, break the Energizer's external plastic case and extract the KIKO stones for small crevices e.g. shower heads, filter casings.

HOUSEHOLD & GARDENING APPLICATIONS

Drinking Water

Wash Vegetable

Aquarium

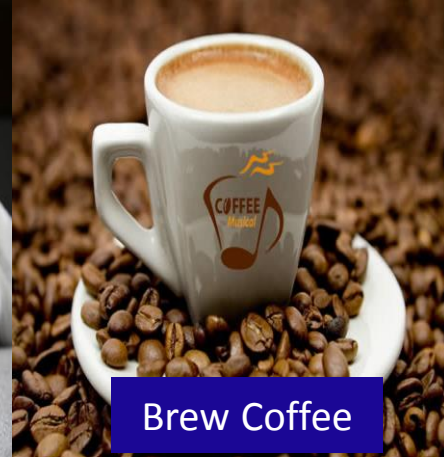

Home Gardening

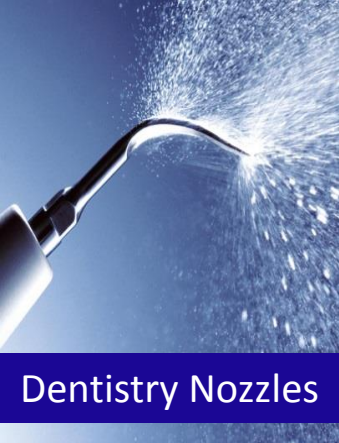

Pet Drinking Water

Brew Coffee

INDUSTRIAL APPLICATIONS

Dentistry Nozzles

Golf Course

Window Cleaning

Car Wash

Crop Nursery

Laundry

Bakery

Industrial Ware Wash

Car Radiator

Poultry Drip Piping

HEALTH LIFE STYLE APPLICATIONS

Spa

Gym Towel Treatment

Facial Spray

Facial Cleaning

WATERCEUTICAL™ APPLICATIONS

- Cleans medical bed pans & equipment – reduces water scale build-up - minimize legionnaire's.
- Safe for drinking water.
- Assist detox – metallic flush for autistic children.
- Reduces vein swelling – soak feet 10 minute daily
- Improves absorption rate into tissue cells.
- Rapid mix and blends of composite pharmaceuticals.

HOW TO CONDUCT A TASTE TEST

- Prepare two separate sets of sampling beverage, e.g. drinking water, red wine, all type of juices, coffee, teaetc.
- Simply Immerse KIKO Energizer in one of the test beverage for about 10 seconds.
- Remove the Energizer.
- First taste the beverage without contact with KIKO Energizer.
- Follow by tasting the Energizer treated sample beverage to compare the differences.

Taste smoother

More aroma, less bitter

Better fragrance

Sweeter, improved favor

SAFETY TESTS – COMPLIANCE UNDER USA FDA CLEAN WATER ACT OF 1975

Test for Human Consumption

July 2010

TUV Laboratory Singapore

The above results show that the sample complies with the requirements of SS 375 : Part 3 : 2001 'High Temperature Tests' and is deemed suitable for use in contact with hot water (85oC) intended for human consumption.

PSB Singapore

Test for Chemicals released

Feb 2010

Mechem Consultancy PTE, Singapore

Test results were obtained by comparing same amount of tap water before applying Kiko stone and after applying Kiko stone. Findings: No chemicals was released from the Kiko stone.

Test for Leachable Lead & Cadmium

May 2008

Intertek Testing Services, Taiwan

Tested for FDA compliance guideline on leachable lead and cadmium content for ceramic ware (Kiko stone). Findings: Comply with FDA guideline

Test for CFU of aerobic bacteria

Feb 2012

South East Water Scientific Service, United Kingdom

Zero CFU detected and treated water property does not exceeds the maximum PCV as defined in the UK's Water Supply (Water Quality) Regulations 2000

Test for Hunan Consumption

Aug 2012

Shenzhen Academy of Metrology & Quality Institute

The test results show KIKO improves normal tap water softness, does not contain any harmful chemicals, safe for human consumption and conforms to PRC Health Standards
